

SOUTAN BASAK

VB.NET DEVELOPER | .NET FRAMEWORK | ASP.NET WEB FORMS | SQL SERVER | IIS | BUSINESS APPLICATIONS

Kolkata, India | (+91) 9046759988 | soutanbasak@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

VB.NET / .NET Business Application Developer with 4+ years of experience designing, building, and supporting desktop and web-based business applications using VB.NET, WinForms, ASP.NET Web Forms, and Microsoft SQL Server. End-to-end delivery experience across payroll, HRMS, CRM, inventory, and billing systems — from requirement gathering and database design through business-logic development, reporting, testing/UAT, and production support. Hands-on experience deploying ASP.NET Web Forms applications through IIS and configuring LAN-based access, gained through both personal projects and enterprise HRMS environments including HRMThread by Sensys Technologies. Domain depth in payroll/HRMS workflows adds practical business-process context to development work. Currently expanding into modern .NET web development (C#, ASP.NET Core, Web API) alongside Next.js/Supabase-based full-stack projects.

CORE TECHNICAL SKILLS

Programming Languages: VB.NET, VBA, Basic JavaScript, HTML, CSS

Frameworks / Platforms: .NET Framework, ASP.NET Web Forms

Desktop Development: WinForms (Desktop Business Applications)

Web / Deployment: ASP.NET Web Forms, IIS (Internet Information Services), LAN-based Application Deployment

Database: Microsoft SQL Server (SQL Server), SQLite, MS Access

Reporting: Crystal Reports, RDLC, Excel Reporting/Automation

Automation: VBA, Google Apps Script, SMTP Email Automation, PDF Processing

Tools: Visual Studio, VS Code, Git, GitHub, Vercel

Modern Web / Project Exposure: Next.js, Supabase, PostgreSQL, Prisma

PROFESSIONAL EXPERIENCE

Business Application Developer & HRMS Specialist — ACC Infotech

Sep 2022 – Present | Kolkata, India

- Designed and developed **VB.NET desktop business applications** for payroll, HR, and operational workflows, covering the full cycle from requirement discussion to deployment.
- Built and maintained **SQL Server database integrations** for business applications, including schema design, data integrity checks, and query-level troubleshooting.
- Implemented **business logic and workflow rules** in VB.NET applications to match client-specific payroll and operational policies, supplemented with VBA scripting.
- Installed, configured, and supported **ASP.NET-based HRMS applications through IIS**, including application connectivity, database configuration, and LAN-based client access.
- Delivered **installation, implementation, and production support** for payroll/HRMS software across client organizations — including working with and supporting HRMThread by Sensys Technologies (an ASP.NET-based HRMS platform), EasyPay, AssetExpert, EasyTDS, and ChequeMate.
- Debugged and resolved **application-level and data-level issues** reported by end users, performing root-cause analysis and applying fixes in live business applications.
- Developed and customized **Crystal Reports and RDLC reports** for payslips, attendance, and management reporting within VB.NET applications.
- Cleaned, structured, and processed raw business data into reliable SQL Server databases supporting application logic and reporting.
- Gathered client requirements directly and translated them into application features, validating functionality with end users before release.
- Performed **manual/UAT testing** of developed applications prior to client delivery to verify functional accuracy.
- Automated business workflows and reporting using VBA and Google Apps Script alongside core VB.NET development work.

SELECTED PROJECTS

- **Happy Business CRM** (*VB.NET, SQL Server*) — Developed a customer management and workflow-tracking desktop application for operational monitoring, with SQL Server-backed data storage.
- **Inventory Management System** (*VB.NET, SQL Server*) — Built a multi-user inventory application with barcode scanner integration and LAN support for concurrent multi-terminal use.
- **Payroll Data Analysis & Reporting Engine** (*VB.NET, SQL Server, MS Excel*) — Built a VB.NET application generating Summary, JV, Analysis, and Variance payroll reports from a single calculation core, with Excel export.
- **Billing Software System (Project Lead)** (*VB.NET, SQL Server*) — Designed application structure, form design, and workflow/data flow from client requirements; guided the developer team and led testing before delivery.
- **ASP.NET Web Forms Login & Database Application** (*VB.NET, ASP.NET Web Forms, SQL Server, IIS*) — Built a small ASP.NET Web Forms application with VB.NET, including a login page and database-connected data access page; published and deployed through IIS and tested access from multiple systems over LAN.
- **Advocate CRM** (*Next.js, Supabase, Prisma, PostgreSQL*) — Full-stack client/case management web application with appointments, billing, hearings, and role-based authentication.
- **Bulk Email Sender & Bulk PDF Name Changer** (*VB.NET, Python, SMTP*) — Built a VB.NET utility to automate payslip distribution via SMTP and rename PDFs in bulk based on keyword search inside the PDF.
- **License Key Generator** (*VB.NET, HTML*) — Developed an encrypted software licensing and activation management application for internally built software.
- **Reimbursement management** (*VB.NET, MS SQL*) — Built a multi-user VB.NET application which employees can add or view their reimbursement details along with proper advance management and reports

SQL / DATABASE EXPERIENCE

- Hands-on Microsoft SQL Server experience, including query writing, database design, and data integrity maintenance for business applications.
- Integrated SQL Server databases into VB.NET applications for payroll, CRM, inventory, and billing systems.
- Cleaned, structured, and migrated raw business data into normalized SQL Server tables to support reliable application logic and reporting.
- Wrote and maintained SQL queries and stored logic to support payroll calculations, reporting engines, and data validation routines.
- Used SQL Server as the backend for multi-user, LAN-based applications (e.g., Inventory Management System).

TESTING, SUPPORT & IMPLEMENTATION

- Performed manual and User Acceptance Testing (UAT) of VB.NET applications after development, verifying functionality against client requirements before release.
- Debugged application- and data-level issues in production business applications, tracing errors to root cause across UI, business logic, and database layers.
- Provided ongoing production support, monitoring deployed applications and resolving client-reported functional or data issues.
- Led testing coordination on the Billing Software System project, working closely with developers and clients to validate workflow accuracy before go-live.
- Gathered client requirements, supported implementation/installation of payroll-HRMS software, and managed client handoff for new deployments.

EDUCATION

Bachelor of Science (Computer Science Honours)

Kalyani University, 2015 | Computer Science, Mathematics, Physics

PROFESSIONAL DEVELOPMENT / CURRENT LEARNING

Currently expanding from VB.NET/ASP.NET Web Forms toward modern .NET web development — progressing through C#, ASP.NET MVC concepts, ASP.NET Core, Web API, and Entity Framework Core — alongside continued full-stack project work in Next.js, Supabase, and Prisma. This is project/learning exposure, not professional work experience.
